Define the Problem Statements

Date	6th july 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	2 Marks

Problem Statement:

Healthcare organizations generate large amounts of patient data, making it difficult to identify heart disease risk factors through traditional analysis methods. There is a need for an interactive Tableau dashboard that visualizes patient demographics, clinical parameters, and disease trends to support faster diagnosis, better decision-making, and improved patient care

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Doctor / Cardiologist	Identify patients at high risk of heart disease and monitor their health trends	Patient data is scattered across multiple records and difficult to analyze manually	Traditional reports do not provide interactive visualizations or real-time insights	It is difficult to make quick, accurate, and data-driven clinical decisions
PS-2	A Hospital Administrator	Analyze patient health data to improve treatment planning and resource allocation	Large volumes of healthcare data are complex and time-consuming to interpret	Manual analysis often misses hidden patterns and trends	It becomes challenging to improve patient outcomes and operational efficiency
