CUSTOMER EMPATHY MAP CANVAS

Project: Heart Disease Analysis using Tableau

Team ID	:	HDA-01
Date	:	31 January 2025
Team Name	:	Health Insight Team

SAYS

- I need accurate and reliable patient data.
- I want easy-to-understand visual reports.
- I need quick insights to make better decisions.
- It should be easy to filter and explore data.

THINKS

- How can I identify patients at high risk of heart disease?
- Which factors are most affecting heart health?
- How can I monitor patient trends over time?
- Can data visualization improve my decision-making?

DOES

- Analyzes patient data and medical histories.
- Uses Tableau dashboards to explore trends.
- Filters data by age, gender, risk factors, etc.
- Shares insights with colleagues and administrators.

HEARS

- Patient concerns and symptoms.
- Feedback from other doctors and specialists.
- Hospital guidelines and healthcare policy changes.
- Updates on new research and treatment methods.

USER
Doctor / Cardiologist / Healthcare Analyst / Hospital Administrator

SEES

- Large volumes of patient data.
- Lab test results and reports.
- Medical charts and ECG reports.
- Existing dashboards and visualizations.
- Patterns and trends in heart disease data.

FEELS

- Concerned about patient health and outcomes.
- Responsible for accurate diagnosis.
- Pressured to make quick and correct decisions.
- Motivated to use data for better patient care.

PAIN POINTS

- Data is scattered in multiple files and systems.
- Time-consuming to analyze large datasets manually.
- Difficult to identify hidden patterns and risk factors.
- Lack of interactive and real-time dashboards.
- Limited time for in-depth data exploration.

GAINS

- Interactive dashboards for quick insights.
- Early detection of high-risk patients.
- Better monitoring and treatment planning.
- Data-driven decisions improve patient outcomes.
- Efficient reporting and communication.
