

Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	8th july 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	4 Marks

[We just gave sample technology stack below page we used in our project](#)

Technical Architecture:

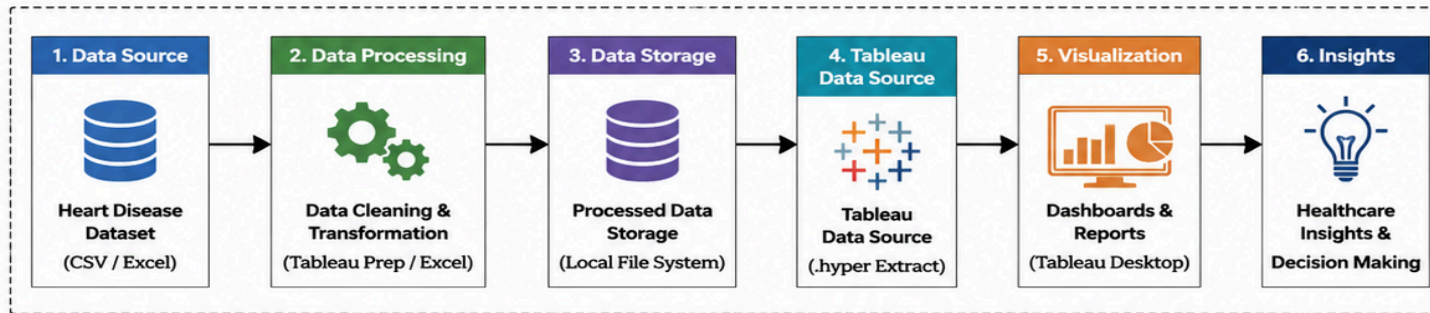

Table-1 : Components & Technologies

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application (Dashboards, Filters, Visualizations)	Tableau Desktop
2.	Data Source	Source of the heart disease dataset	CSV / Excel
3.	Data Processing	Data cleaning, transformation and preparation	Tableau Prep / Excel
4.	Application Logic	Business logic using calculated fields, parameters, filters	Tableau Calculated Fields
5.	Data Storage	Storage of processed data	Local File System (CSV / .hyper)
6.	Visualization	Creating charts, graphs, KPIs and dashboards	Tableau
7.	External Tools	Additional tools used (if any)	Microsoft Excel (Data Review)
8.	Infrastructure	Application execution environment	Windows PC / Local Machine

Table-2 : Application Characteristics

S.No	Characteristics	Description	Technology / Approach
1.	Open-Source Frameworks	Open-source tools or libraries used	Tableau Public (Free for Publishing)
2.	Security Implementations	Security and data access control	Local file access, Windows Security
3.	Scalable Architecture	Ability to handle large datasets and more users	Tableau handles large datasets efficiently with Hyper Engine
4.	Availability	Measures to ensure availability of dashboards	Local availability via Tableau Desktop (Can be published online)
5.	Performance	Performance optimization approach	Data Extracts, Filters, Aggregations, Efficient Calculations
